History of Garlic

Garlic, *Allium Sativum*, is one of the oldest domesticated plants known for its culinary use, as well as medicinal purposes. Garlic has been used medicinally in many cultures for 1000 years. In recent decades, garlic has been the subject of several clinical studies for cardiovascular (decrease in body lipids), anti-cancer, antioxidant, anti-microbial, aging effects and immuno-stimulant. In addition to the studies, many reports & reviews have also been published in pharmaceutical & nutraceutical publications. Garlic supplements have shown a continuous successful sale record in the retail, health & mass markets. The recommended garlic dosage in most studies was 1200-1800 mg representing Allicin at .05 mg/kg/body wt.
1 med. garlic clove= ~ 600 mg garlic powder

Why ask for New-Gar®?

10 reasons why you should ask for New-Gar® with confidence

1. Quality & consistence
2. Manufactured under cGMP
3. Kosher OU Certified
4. California warehousing
5. Competitive pricing
6. Technical & Marketing Supports
7. A comprehensive garlic center in one click on our website:
www.nature4science.com
8. Pesticides & Heavy metals tests meeting US&FDA laws
9. Lab certified results complying with current USP methods
10. Experienced, honest & dependable personnel
